

Ex. No.: 04	Javascript -DOM elements and events
27.01.2026	

Theme: Online Event Management System Using DOM Elements**Aim:**

The aim of this project is to design and develop an interactive Online Event Management System that allows users to view upcoming events, select their preferred event, and complete registration seamlessly. The system utilizes JavaScript DOM manipulation, event handling, and browser local storage to enable dynamic functionality and persistent data management. Additionally, the project focuses on enhancing user experience through real-time form validation, responsive navigation highlighting, and interactive user interface components.

Description:

The Online Event Management System is a web-based application designed to help users browse, select, and register for various events easily. It provides an interactive interface where users can view event details and submit their registration through a structured form. The system uses JavaScript to handle form validation, user interactions, and dynamic content updates without reloading the page. It also stores registration data in the browser's local storage to ensure persistence. An active navigation feature highlights menu links based on scrolling position for better usability. Overall, the project focuses on improving user experience through responsive design and real-time feedback mechanisms.

Code:Question 3: Currency Converter (Using **onchange** Event)

```
<!DOCTYPE html>
<html>
<head>
<title>Currency Converter</title>

<style>
body{
font-family: Arial;
background-color:#e8f5e9;
text-align:center;
}

.container{
background:white;
padding:20px;
width:350px;
margin:auto;
margin-top:60px;
border-radius:10px;
box-shadow:0 0 10px gray;
}
```

```

input,select{
padding:8px;
margin:10px;
width:80%;
}
h2{
color:#1b5e20;
}
</style>
<script>
function convertCurrency(){
let amount = document.getElementById("amount").value;
let currency = document.getElementById("currency").value;
let result;
if(currency=="USD")
result = amount * 0.012;
else if(currency=="EUR")
result = amount * 0.011;
else if(currency=="GBP")
result = amount * 0.0095;
else if(currency=="JPY")
result = amount * 1.80;
document.getElementById("output").innerHTML =
"Converted Amount: " + result;
}
</script>
</head>
<body>
<div class="container">
<h2>Currency Converter</h2>
Enter Amount (INR)<br>
<input type="number" id="amount"><br>
Select Currency<br>
<select id="currency" onchange="convertCurrency()">
<option value="">Select</option>
<option value="USD">US Dollar</option>
<option value="EUR">Euro</option>
<option value="GBP">British Pound</option>
<option value="JPY">Japanese Yen</option>
</select>
<h3 id="output"></h3>
</div>
</body>
</html>

```

Question : 4 Cake Order Calculator (Using [onclick](#) Event)

```

<!DOCTYPE html>
<html>
<head>
<title>Cake Order Calculator</title>
<style>
body{
font-family:Arial;

```

```
background:#f1f8e9;
text-align:center;
}
.container{
background:white;
padding:20px;
width:350px;
margin:auto;
margin-top:50px;
border-radius:10px;
box-shadow:0 0 10px gray;
}
h2{
color:#1b5e20;
}
</style>
<script>
function calculateCake(){
let quantity = document.getElementById("qty").value;
let price = 500;
let total = quantity * price;
document.getElementById("result").innerHTML =
"Total Price = ₹" + total;
}
</script>
</head>
<body>
<div class="container">
<h2>Cake Order</h2>
Cake Name: Chocolate Cake<br><br>
Price per Cake: ₹500<br><br>
Enter Quantity<br>
<input type="number" id="qty"><br><br>
<button onclick="calculateCake()">Calculate Order</button>
<h3 id="result"></h3>
</div>
</body>
</html>
```

Input & Output:

Question 3: Currency Converter (Using **onchange** Event)

The image displays three sequential screenshots of a web application titled "Currency Converter".

First Screenshot: The application has a title "Currency Converter" in green. Below it is a label "Enter Amount (INR)" followed by a text input field containing the value "70346". Below the input field is a label "Select Currency" followed by a dropdown menu with the text "Select" and a downward arrow.

Second Screenshot: The dropdown menu is open, showing a list of options: "Select" (highlighted in blue), "US Dollar", "Euro", "British Pound", and "Japanese Yen".

Third Screenshot: The dropdown menu is closed, and the selected option "British Pound" is displayed. Below the dropdown menu, the text "Converted Amount: 668.287" is shown.

Question : 4 Cake Order Calculator (Using **onclick** Event)

The image shows a web application titled "Cake Order" with a cake icon. Below the title, it displays "Cake Name: Chocolate Cake" with a small cake icon. Below that, it shows "Price per Cake: ₹500". There is a text input field labeled "Enter Quantity". At the bottom, there is a pink button labeled "Calculate Order".

Cake Order 🍰

Cake Name: Chocolate Cake 🍫

Price per Cake: ₹500

Enter Quantity

Calculate Order

Total Price = ₹1500

Result:

The Online Event Management System was successfully implemented with dynamic and interactive features that enhance overall usability. Users can browse events, complete registrations with proper validation, and have their data stored using browser local storage for persistence. The system effectively demonstrates DOM manipulation, event handling, and responsive navigation, resulting in a smooth and efficient user experience.
