

Ex. No.: 07	Node.js Basics
10.03.2026	

Aim:

To create a simple Node.js web server using the built-in http module that displays a greeting message along with the current date and time.

Description:

This program creates a basic web server in Node.js. When a user visits <http://localhost:3000>, the server responds with a greeting message and dynamically generated system date and time.

Procedure:

1. Import the http module.
2. Create a server using `http.createServer()`.
3. Define response headers (Content-Type: text/html).
4. Display:
5. Greeting message
6. Current date and time using `new Date()`
7. Start the server on port 3000.
8. Test using browser.

Steps to Run:

1. Save file as `server.js`
2. Open terminal in the folder

Run: `node server.js`
`http://localhost:3000`

Code:

```
const http = require("http");

const server = http.createServer((req, res) => {
  const name = "Edith Miriam"; // Replace with your name
  const currentTime = new Date();

  res.writeHead(200, { "Content-Type": "text/html" });

  res.write(`<h2>Hello from ${name}'s Node.js Server</h2>`);
  res.write(`<p>Current Date and Time: ${currentTime}</p>`);

  res.end();
```

```
});
```

```
server.listen(3000, "0.0.0.0", () => {  
  console.log("Server running at http://localhost:3000");  
});
```

Output:

Result:

The experiment was successfully completed.
